A diluted on ethylene glycol based coolant for use in engines. It employs Organic Acid Technology [OAT] inhibitor and is nitrite, amine and phosphate [NAP] free. It is also free of borate and silicate. The sophisticated technology provides superior and permanent protection to all components of the cooling system and a life span of 4 - 6 years or 250.000 km for passenger cars and 500.000 km for professional applications. Ready to use solution.

APPLICATIONS

Formulated for long-term use in all engines especially those constructed from aluminium, cast iron and magnesium alloys. Not the best choice for older cooling systems that have copper/brass radiators and heater cores, especially not for the lead solder used in them. Suitable for cooling circuits of the open or closed type (vehicles and heating) with a protection against freezing until -36°C. This solution is ready to use and can be used during the whole year.

FEATURES

Anti-freeze properties: Superior cold temperature performance Anti-corrosion properties: Outstanding corrosion protection Total system protection: Excellent heat transfer and dispersion
